OLDS & WHIPPLE

SEEDS AND
FERTILIZERS
HARTFORD.CONN.

PHOTOPHIC TO THE

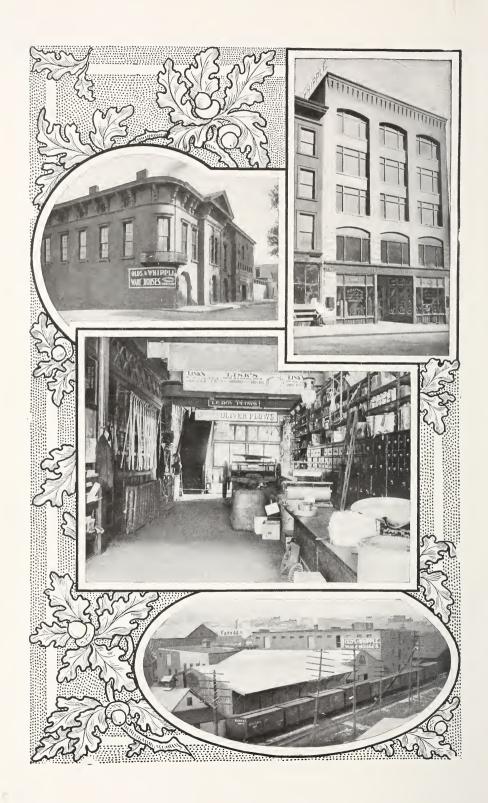

A magnificent crop of Cuban shade tobacco on the plantation of the Hartford Tobacco Corp., Hazardville, Conn. This corporation are large users of our fertilizers. (Photograph taken Aug. 13, '18)

Foreword.

AT the time of issuing this Catalog one great fact stares us in the face, a world shortage of foodstuffs. Mr. Hoover, food conservator for the world, states that there will be much suffering and actual starvation in Europe unless we ship this year twenty to twenty-five million tons of foodstuffs. This is very much more than we have ever shipped in one year and about four times the amount in one year before the war. It is the duty of every one who can to produce some part large or small of this very necessary food. We thank you for your patronage in the past and shall endeavor to merit same in the future.

Our Special Mixtures for all Crops

The following pages give you a list of the special fertilizers which we manufacture at our own factory.

These special mixtures are from tested formulae, proved out by practical growing tests. They are finely ground, and mechanically, in such condition, as to render them readily available to the growing crops.

Their use will repay you. They produce the kind of crops that pay. Used and endorsed by best growers.

O. & W. Tobacco Special

This is our war time tobacco mixture made with a cottonseed meal base. In this formula we give you the benefit of our years of experimenting and close observation on our own tobacco farms, and during these years of experimenting we have proved (at least to our own satisfaction) that the color, texture and grain of the tobacco leaf is very much effected by the fertilizer used.

GUARANTEED ANALYSIS \(\) 5 to 6 per cent. Ammonia. (3 to 4 per cent. Available Phosp. Acid.

O. & W. Complete Tobacco Fertilizer

We are again manufacturing our O. & W. Complete Tobacco Fertilizer with Potash. It is true the amount of Potash is not large but a small amount is better than none at all especially so as several Crops have been grown with very little or none at all and in some sections some Crops are showing very evident signs of Potash hunger. Lack of body in the leaf and weight per acre, is no doubt in some cases due to lack of Potash.

The Ammonia and Available Phos. Acid are derived from the same high grade sources we have used in previous year. The fact that many of the firms buying tobacco, large growers themselves, use our fertilizer is the best kind of a recommendation

ANALYSIS $\left\{ \begin{array}{l} 5 \text{ to } 6\% \text{ Ammonia.} \\ 3 \text{ to } 4\% \text{ Available Phosphoric Acid} \\ 1 \text{ to } 2\% \text{ Actual Potash.} \end{array} \right.$

O. & W. Corn, Potato and Onion Fertilizer

This is one of our high grade special mixtures for use on Corn, Potato and Onion Crops

The sources of plant food are such as are exceedingly available to the plant and best suited to promoting rapid and vigorous growth. Tested at our own farms we are able to speak authoritatively as to its merits. All growers will be repaid by using this special mixture on their Crop.

Our soils are well adapted to the culture of these Crops and to make them profitable as well, is an easy matter if the culture is supplemented and promoted by the use of our special fertilizer.

GUARANTEED ANALYSIS { 4 to 5% Ammonia. 6 to 7% Available Phosphoric Acid. 1 to 2% Actual Potash

O. & W. Special Grass Fertilizer

GUARANTEED ANALYSIS \ 6 to 7\% Ammonia. \ 4 to 5\% Phosphoric Acid (available).

The grass crop is a valuable one, and yet the value will depend on the extent to which the soil has been cared for and the plant food present therein.

To secure the highest value the soil should be liberally fed with the best fertilizer obtainable.

Grass crops like other crops require and thrive best when certain forms of potash, phosphoric acid and nitrogen are used. We believe that in this "O. & W. Special Grass Fertilizer" we have developed the very finest mixture for grass that has ever been used. We have, by personal experiment, come to know just what forms of these different plant food elements are required and have mixed them in the proportions needed with the result that we have obtained a grass fertilizer that can well be called high grade.

Give this mixture a trial. You will be satisfied that our claims are well founded.

O. & W. SPECIAL PHOSPHATE

GUARANTEED ANALYSIS $\left\{ \begin{array}{ll} \text{Ammonia 5 to 6\%.} \\ \text{Phosphoric Acid 4 to 5\%} \end{array} \right.$ (available).

This mixture has been made by us since 1890. It is a great favorite among market gardeners and others for general garden purposes. It contains a high ammonia percentage, and this quality makes it very desirable for forcing purposes. It is also widely used as a starter for all crops.

If you want an all around good fertilizer for garden and general use, you can't beat this mixture. For the home garden it is the ideal thing to use.

O. & W. Special Onion and Grain Fertilizer

This special fertilizer mixture is a great favorite in the big onion districts in Massachusetts and Connecticut. In its preparation, regard for the needs of the onion crop both as to growth and quality, have been considered, and the result is a mixture best suited to the plants needs.

Do not be satisfied with anything short of the best. Give this mixture of ours a trial and its use will convince you of our claims for it. Endorsed by best growers.

Guaranteed Analysis as follows:

3 to 4% Ammonia. 8 to 9% Available Phosphoric Acid.

AGRICULTURAL LIME

Do not forget to Lime the Soil

Most of our Connecticut soil is deficient in lime. Its place in the soil is most necessary and must be supplied if good crops are to be had.

It corrects acidity. It makes available for the plants use other stored up plant foods.

We offer this Agricultural Lime in various forms; a pure high grade air-slaked lime, in bulk or bags, and

Ground Limestone in cloth bags.

Prices on this and all mixtures on application.

O. & W. High-Grade Tobacco Starter

This high grade starter has been used with conspicuous success by some of our best growers in the valley. We recommend that it be applied after the first time hoeing. At that critical stage of growth an abundant supply of quickly available ammonia enables the plant to get a vigorous start, overcome and grow away from any unfavorable condition that may exist.

Experience has taught us that the crop that grows quickly, vigorously and does not stop until it reaches maturity produces the best goods.

Apply about 500 lbs. per acre.

Guaranteed Analysis $\left\{ \begin{array}{l} \text{II-I2\% Ammonia} \\ 3\text{-}4\% \end{array} \right.$ Available Phosphoric Acid.

DESCRIPTIVE CATALOGUE and PRICE LIST

OF

Garden and Farm Seeds, Agricultural Implements and Fertilizers for 1919

SEEDS

We exercise extreme care in selection and handling of all seeds. In the first place we either have them grown for us by reliable growers, or otherwise secure them from the most reliable sources. The very nature of the business will not admit of our guaranteeing, however, either the productivity or the crop. On the other hand no one can excel us in the general care and supervision given to this end of our business. Seeds—the cost of them—is the least expense incurred by the grower, yet the most important item in farming. Get the best.

PREMIUM OFFER

On Seeds bought by the package or ounce we will allow you to select \$1.25 worth for which you may send us \$1.00.

MAIL ORDERS AND SHIPMENTS

Prompt attention to orders by mail. Mailing blank is enclosed in Catalog to render this service more convenient. Be particular in giving name and address. The new system of Parcels Post enables us to make shipment of large packages by mail.

SEEDS BY MAIL

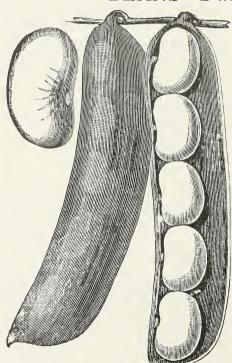

We will pay postage on seeds in packets, ounces, or by pound, with these exceptions; peas, beans, corn, onion sets, grain and grass seeds, which necessitate an extra charge of 8 cents per pint.

ASPARAGUS

An Asparagus bed may be made from one or two year old roots, planted in fall or spring. Plant the roots in rows four feet apart, leaving about twelve inches between plants in the row. Should be planted in trenches and gradually filled in as plants grow. Seeds may be sown in April in drills one foot apart and one inch deep. One ounce of seed will sow sixty feet of drill.

Palmetto Roots,-Fine, 2 year old. Per 100, \$0.75			

BEANS-Dwarf or Bush

To produce a regular succession of crops through the season, plant every two weeks, from about beginning of May to end of summer. Plant in rows 18 inches apart, two inches deep; cultivate only when soil is dry, as the scattering of earth on vines will cause them to rust. One quart will plant 100 feet of drill and one and one-half bushels for one acre.

BEANS

Owing to extremely unfavorable weather conditions, the bean crop is very short, some varieties were almost a total crop failure. Stocks are scarce and prices high.

BROCCOLI

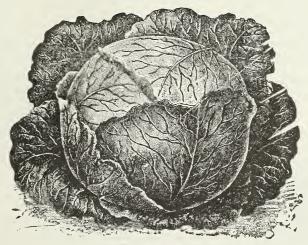

A vegetable resembling Cauliflower but much hardier. Requires the same general culture as cabbage. One ounce of seed produces about 1,500 plants.

	Per pkt.	Per oz.
Purple Cape.—Medium size heads, hardy,	\$0.20	\$0.50
White Cape.—Like Purple Cape, but of cream white color.	.20	.50

BRUSSELS SPROUTS

A species of cabbage family and cultivated in about same manner. One ounce of seed will produce about 1,200 plants.

CABBAGE—Early

All Seasons.

All the Cabbage family require rich, deep, well-drained soil. For the early kinds, plant in rows 30 inches apart and 16 inches between the plants. For the late varieties, three feet between the rows and two feet between the plants. For very early use, sow in January or February in hot-beds. Set out when plants are strong enough into other hot-beds or set in cold frames in March. Transplant when danger from frost is past to open ground. The late, or winter crop seed can be sown in May and the plants set out when large enough.

To destroy the green worm that attacks the cabbage plant, use a solution of one ounce of saltpetre in three gallons of water. One ounce of seed will produce about 3,000 plants, one-quarter pound for one acre.

	Per pkt.	Per oz.	Per 1b.
Copenhagen Market.—Extra early round hard head	\$0.15	\$1.25	\$13.50

Paris Golden.

CELERY

Sow seed about the first of April in hot-bed o cold frame. Transplant four inches apart, when three inches high in rich soil; water and protect until well rooted, then transplant into rows 5 or 6 feet apart either on surface or in trenches 8 inches deep. Set the plants 10 or 12 inches apart. To blanch draw earth around the plants from time to time.

One ounce of seed will give about 4,000 plants.

7	Per pkt.	Per oz.	Per 1b.
Paris Golden, Self Blanching, (French.)—An early golden variety, very popular,		\$.90	\$10.00
Boston Market.—One of the best varieties in cultivation,	.05	.25	2.50

PARSNIP

Make the soil very fine and plant the seed very early, in rows eighteen inches apart, thinning plants to three or five inches in the rows; seeds should be covered about one-half inch deep.

Parsnips, aside from table use, have great value for stock-feeding purposes. Are improved by allowing to remain in open ground through the winter.

One ounce to 150 feet of drill; five pounds for one acre.

	Per pkt.	Per oz.	Per 1b.
Abbott's Improved Hollow Crown -A great cropper, to			
and sweet,	. 05	.15	1.25
Long Smooth White One of the best for ge	neral		
cultivation,	05	.15	1.25

PEAS

The wrinkled varieties, while the sweetest of all peas, are more liable to rot, being tender, and need to be planted thicker and later than the round, hard sorts. Soil needs to be well manured. Have the dwarf varieties in rows two and one-half feet apart; those kinds growing two to three feet high, in rows three feet apart, and the tallest in rows four feet apart. The smooth varieties may be sown as soon as ground can be worked; the wrinkled sorts when soil is well warmed.

One quart to 100 feet of drill: one and one-half bushels to an acre.

TOBACCO

We are very careful in the selection of our tobacco seed, growing much of it on our own farm and saving the seed from only such plants as bear the correct type of leaf. We buy only of the most reputable growers. This seed is thoroughly blown which removes all the light seed, as we believe the heavier seed makes the strongest plants.

OUR SPECIAL FERTILIZER
FOR THE TOBACCO CROP.

O. & W. LAWN GRASS SEED

A Perfect Lawn Mixture.

Our lawn grass mixture is composed exclusively of the best seeds of the choicest fine bladed grasses free from weeds.

It will produce a rich, velvety lawn, an enduring, elastic turf. To get the best results proper drainage and thorough preparation of the soil is necessary; this being done our seed mixture assures a beautiful lawn.

We recommend sowing about one quart to a space fifteen feet square, or four bushels to the acre.

Price, Per qt., 3oc. 2 qts., 55c. 1/2 peck, 85c. Peck, \$1.50 Bush. \$6.00

OUR LAWN FERTILIZER

For Spring and Early Summer Treatment

To maintain a luxuriant lawn proper fertilizing is necessary. The old method of applying stable manure, so objectionable because it carries weed seeds as well as being unsightly and odorous, is no longer practiced. We manufacture a lawn dressing carrying all the essential plant foods so necessary to produce luxuriant growth and dark, rich, green color so much desired.

We recommend for lawns that it be used at rate of 100 lbs. for 10,000 sq. ft. For gardens double the quantity.

Price, \$3.75 per Cwt. City delivery.

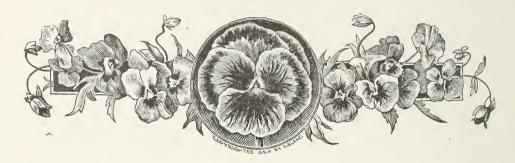

We also have for Lawns:

Bone Meal,	Price Per	100 lbs.	\$3.75
Sheep Manure,	44	44	3.00
Hard Wood Ashes.	46	44	2.50

OUR O. & W. LAWN FERTILIZER

A SPECIAL FERTILIZER FOR LAWNS.

A Selected List of Popular Flower Seeds

The cultivation of flowers well repays all the labor and care bestowed on them. Much of the disappointment attending unsuccessful cultivation could be overcome by careful planting and observance of those conditions of soil and growth peculiar to these sensitive plants. The soil should be mellow and well enriched with compost or fertilizer. If made into beds they should be well drained. The soil also requires to be made as fine as possible, not lumpy. Seeds should be covered in strict proportion to their size. The smaller seeds need little, if any covering.

After sowing they should be well *firmed* by pressing the surface with a smooth planed board. On each package directions are given specific to that kind.

PREMIUM OFFER.—In making your selection of the following, packets to the value of \$1.25 may be selected for \$1.00 in cash.

List of Grass, Clover and Millet Seed

(At market Prices)

Timothy, or Herd's Grass. One of, if not the commonest and best known grasses. Very valuable for hay. Perennial, fibrous and often bulbous rooted.

(45 lbs. to the bushel).

Red Top. Is a fine permanent grass. Often sown with timothy and red clover, in which case the clover soon disappears to be replaced by timothy, which in turn gives way to the red top. Very valuable in mixtures for permanent pastures.

Chaff Red Top 10 lbs. to the bushel. Fancy or cleaned 35 lbs. to the bushel.

Kentucky Blue Grass. Also called June grass. Root-creeping, perennial, flowers in June. It requires about two to three years to become well set and does not arrive at perfection as a pasture grass until the third or fourth season.

(14 lbs. to the bushel.)

Orchard Grass. A perennial grass, flowers from June to July. Very valuable for pastures, also in connection with timothy and clover for hay crops. When used with timothy use one bushel orchard and 8 lbs. clover. If sown alone use three bushels to the acre. (14 lbs. to the bushel.)

Rhode Island Bent. Root-creeping, perennial, flowers in July. Very valuable for lawn purposes. Sow from three to four bushels to the acre.

Large Red, or Mammoth Clover. Grows from four to five feet high; stocks so coarse that cattle will eat but leaves only, but by its judicious use, exhausted lands may be reclaimed. (60 lbs. to the bushel.)

Medium Red Clover. The most important of all the varieties of clover for the practical purposes of agriculture. Sown with timothy and other grasses it produces desirable hay or pastures. (60 lbs. to the bushel.)

White Clover. The value of this clover is well known; it is found in most every natural pasture. It is adapted to all soils. Being deep-rooted it withstands drought when grown on dry, sandy sections. It should form a part of all mixtures for permanent pastures. (60 lbs. to the bushel.)

Alsike, (Clover). This is one of the hardy varieties. It resists cold, extreme drought and wet, and on rich warm soils yields immense crops of hay, or pasture of good quality. (60 lbs. to the bushel.)

Alfalfa (Clover). A heavy forage crop doing well in almost all localities. Requires well limed soil and good drainage.

Hungarian (grass) Millet. Splendid forage crop for light land. On rich land two crops may be grown the same season. Withstands drought and yields abundantly. (48 lbs. to the bushel.)

Golden, or German Millet. A heavier cropper than the Hungarian, and needs a longer season and a stiffer soil, stands up well, is easily cured, makes a coarse, harsh hay, which is greedily eaten by all kinds of stock. (50 lbs. to the bushel.)

Italian Millet. Sometimes called common millet, medium early, leafy, stalk small, grows three to four feet high, heads thick and nodding, six to nine inches long, fine for soiling. (50 lbs. to the bushel.)

Use O. & W. Special Grass Fertilizer The Fertilizer That Makes Grass Grow.

Grain and Miscellaneous Seeds for Fodder Ensilage and Soiling Crops.

(All at Prevailing Market Prices.)

Ensilage and Fodder

The productive capacity of the farm for stock purposes is greatly enhanced by the growing of silage crops.

It has become well known that by the feeding of silage there is a marked increase of profits to the dairy farmer.

We have a selected stock of seeds for silage and green fodder crops as listed below.

Eureka. The greatest of Ensilage varieties. A White Corn of extra large growth leafy and yielding immense returns for silage,

Leaming's Dent Corn. A very early and productive variety.

Mastodon Dent Corn. A strong growing, early, with large stalks and large grain.

Improved Canada Corn,-The standard yellow flint corn.

Longfellow Yellow Flint. A well known flint variety.

Canada Field Peas. Grown largely with oats as fodder crop. At market prices.

Leguminous Plants as Soiling Crops

All the leguminous plants (peas, clovers and beans, etc.,) have the power of taking up the free nitrogen in the air and converting it into available forms of ammonia so very valuable as a fertilizing ingredient to the soil.

Therefore the roots (or, as in some cases where the entire plant is turned under) provides a large supply of available ammonia for the crops which are to follow.

MAINE SEED POTATOES

Grown for Seed by

SEED GROWERS IN MAINE.

We have selected our seed stock from the best growing section of Aroostook County and from reliable seedsmen who have had years of experience handling seed.

We wish to again emphasize the fact that it pays, in increased yield, to plant Maine seed. We show in this Catalogue a photograph of a potato field taken July 2nd, 1918 (see insert). This field was planted with Maine seed except six rows through the center, these six rows were planted with the farmers home grown seed; the photo does not bring out the real difference in appearance of the two sections of this field as it looked on July 2nd. The owner stated at that time he had better bought Maine seed even if obliged to pay \$5.00 per bushel.

Seed brought from Maine has a vigor our home grown seed does not possess. It Pays to Plant Maine Seed.

We speak from experience when we say it is a mistake

To cut seed a long time before using;

To allow the fertilizer to touch the seed pieces;

To allow the seed pieces to remain in the sun uncovered;

To plant seed grown in any section but the far north;

To plant less than 4 bbls. per acre,

To expect a good crop from small seed pieces;

To plant potatoes without first thoroughly pulverizing the soil;

To buy your seeds from any but reliable seedsmen.

Spaulding Rose.—This is a Rose variety, pink skin, good table quality and an enormous yielder.

Irish Cobbler.—An excellent extra early variety, will mature in seven weeks from time of planting; in color pure white with deep eyes, usually of good cooking quality.

Early Harvest.—A white skinned variety of good quality; a vigorous grower and large cropper.

Early Bovee.—This is a seedling of Early Beauty of Hebron, is extra early, produces a fair yield and a good keeper of superfine qualities.

Early Rose.—An old standard sort, early, productive, good keeper and of excellent flavor.

Early Beauty of Hebron.—This is another old time variety, popular with our fathers, as early as the Rose and excellent for table use.

Use O. & W. Potato Fertilizer

IT PAYS TO USE MAINE SEED POTATOES!

Notice the difference in this potato field.

The blossoming, thrifty vines on the extreme right and left are from Maine seed.

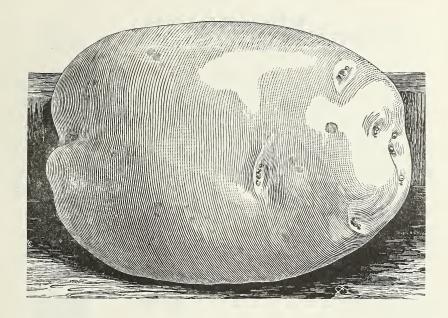

Those in the center rows were of local home grown seed. Both lots planted on same day, and given same treatment of fertilizer, etc.

(Photo taken July 2, '18)

Beautiful crop of seed leaf tobacco grown on the farm of J. W. Dunn, East Windsor. For many years, Mr. Dunn has been an extensive user of our tobacco fertilizer. (Photo Aug. 13, '18)

New Queen.—A seedling of the Hebron, similar in appearance, one of the best early kinds for general crop.

Delaware.—Does well in all soils, similar in appearance to Green Mountain, pure white in color, a good yielder.

Carman 3.—A late Maine crop potato; this variety will produce almost all large potatoes and but few small ones, claimed by its introducers to outyield any other variety. Good keeping qualities.

Golden Prolific.—This variety was introduced by us in 1905 and has justly become very popular; it has all the good qualities of Green Mountains and in addition produces smooth tubers.

Gold Coin.—Productive and of unsurpassed quality, very uniform in size. Skin a light golden tinge, usually having a russet appearance which indicates good table qualities; a vigorous grower not easily effected by blight.

Improved Green Mountain.—This variety is too well known to require any description; it is recognized as the standard of excellence in all New England; white skinned, oval formed, smooth and attractive and a good yielder

It Pays to use our Potato Fertilizer

BUG DEATH

NON-POISONOUS

It frees the plant from all insects. As it contains no arsenic it does not burn or blight the plant, and retard its growth. On potatoes it keeps the vines green from ten days to two weeks longer, thus giving the potato more chance to mature, which means a more starchy potato and one less liable to rot. Last, but not least, the extra yield of marketable potatoes more than pays the entire expense.

PATENTED MARCH 16 1 '97.
Pat. March 16 and Nov. 9, 1897.
Pat. in Canada, Nov. 2, 1807.

Dickey Duster	-	-	-	.50

For Applying Bug Death dry, to potato vines.

Directions for Applying Dry

For potato and other vines which require a top application, apply dry with Perfection Shaker at the rate of 12½ pounds or more per acre to an application, according to size and condition of the vines.

For house and garden plants and small shrubs use rubber atomizer or any of the bellows that are on the market for that purpose. Dust the plant thoroughly. The best results are obtained by using when the vines are damp.

Directions for Using in Water for One Acre

Add to 12½ pounds of Bug Death 80 gallons water; mix thoroughly; spray on vines with any of the various sprayers that are on the market. We prefer a barrel or knapsack sprayer that is fitted with an agitator, otherwise solution must be frequently stirred so that Bug Death is held in suspension. Spray vines thoroughly.

Bordeaux Mixture and Paris Green

Agricultural Implements Farm and Garden Tools

Owing to unsettled market conditions, all prices on implements and tools subject to change without notice.

The following pages are devoted to a description of farm implements which we sell. Our selection of these has been made in the same careful way as governs the selection of all the goods we offer to our customers.

Our object and desire being to sell only the best and such as will be most acceptable to our trade, both in point of service, convenience, and economy.

A partial list follows of some goods we do not illustrate. Read it over carefully as it may contain something you need. Samples of all may be seen at our showrooms, 164-8 State St., and prices will be made upon application. Write us also if what you need is not listed here, as we aim to make our store the headquarters for everything needed on the farm.

"PENNSYLVANIA" Hand and Horse Lawn Mowers

Sizes 12, 14, 16, and 18 inch-Low Wheel. Sizes 15, 17, 19, and 21 inch, High Wheel. The "Pennsylvania" has been recognized for many years as the standard among Lawn Mowers.

Mowers. Cuts longer grass, requires less repairs than any other mower made. Used on the State Capitol grounds and by all first class gardeners_everywhere.

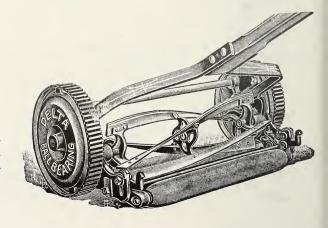

GREAT AMERICAN Lawn Mower

Sizes 15, 17, 19 and 21 inch., High Wheel.

This Mower is of the same manufacture as the 'Pennsylvania,'' and is a high grade machine throughout. Has ball-bearing equipment which insures less friction and wear. It has been sold by us for eleven years and given highest satisfaction.

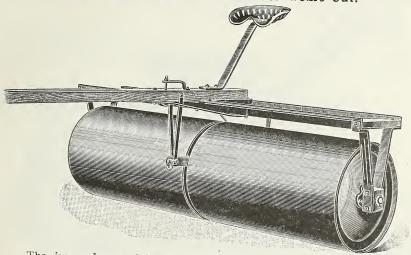

The "DELTA" Ball-Bearing Lawn Mower

This is another of the famous Pénnsylvania family of high grade mowers. It is ball-bearing. Thoroughly well made and of medium price, made in 14, 16, and 18 inch cutting sizes.

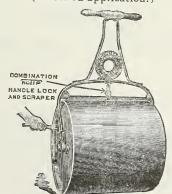

STEEL FIELD ROLLERS

The Land Roller which never wears out.

The rims or drums of these rollers are of best material of heavy gauge and are firmly riveted to heads. There is nothing about these to break and with reasonable care should last a lifetime.

PERFECTION DRILL AND FERTILIZER SOWER

THIS machine will form a drill from 3 to 10 inches deep and will drop into the drill any fertilizer at the rate of 100 to 1,200 lbs. to the acre. The scrapers shown between the wheels are attached to the axle by sockets and are adjustable to any width and height needed to take the soil from the sides of drill and cover the fertilizer as desired.

In turning, the operator, by pressing down the handles, can easily raise the front end of machine from the ground and the horse will swing it into position. The row spacing attachment is simple, strong and leaves a plain mark for horse to follow. In turning, it can be swung up and held against the handle. The lever on right side throws the agitating cylinder into gear. The lever in rear of hopper shifts the bottom plate to give desired quantity of fertilizer to the acre. The adjustable stop on end of hopper will hold the lever where wanted. Price, \$23.00. Net Cash Price \$22.00.

BETWEEN THE ROW SOWER

For sowing fertilizers between rows or for doing other surface work, as sometobacco growers claim that a part of the fertilizing should be done after the first hoeing. The machine is made with wheel inside the frame, and covers a space of 12 inches wide with fertilizer. It has three cultivator teeth, adjustably attached to back end of machine for covering. Price, \$23.00.

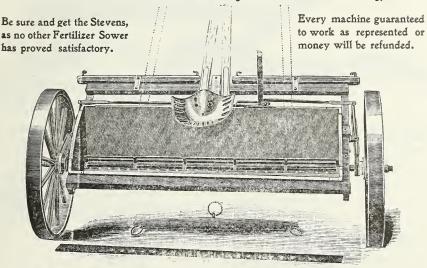

Net Cash Price \$22.00.

Price, \$120.00

The No. 72 "Planet Jr." Two-row is the highest type of two horse cultivator.

It completes two rows at one passage, all widths from 28 inches to 44, inclusive, and is specially built to do this when the rows are irregular, for the operator can change the width apart of gangs while in motion to suit varying rows, by means of convenient levers. Important improvements have been made recently.

"PLANET JR"

Varieties of Steel Plates made for the "Planet Jr." Horse Hoe.

The 1¼ inch steels throw almost no furrow, and run very deep, yet work beautifully as cultivating teeth and subsoilers, very desirable where the soil is to be broken up thoroughly without hilling, as where the ground is clean, but beaten down by rains, or baked by the sun. The next two sizes, 1¾ and 2¼ inch, are desirable for general cultivation, and do superior work in hard lands. The next is 3 inch; this is the size, with one 4 inch for the rear standard, which is sent out with the Horse Hoe, unless otherwise ordered, being best adapted to general work in all kinds of soil

Try A New York Moline Buckeye Mover

The best method of draft for a mower ever invented is the Moline "Spring Draft."

In all work it produces more uniform and lighter average draft, and secures other even more important advantages.

We have them from 4 ft. to 6 ft. size. Get Special Circular on these.

The advantage of a hay carrier as a means of storing away Hay or Grain are so well known that it is not necessary to go into details. They save the time and expense of from one to three men at harvest time — a large item.

The main Frame is of heavy Angle Steel solidly riveted.
Forks are of best Spring Steel, attached with coil Springs. End Forks are outside of wheels.

Extremely light draft and easy of operation, whether used in light hay or heaviest crops of Clover.

In the construction of this machine all the improved features of the Bullard and Mudgett Tedders are used with further valuable improvements of the makers. Their aim has been to make a tedder that would be more durable and hence cost the user less for repairs than any machine now on the market.

We believe this has been accomplished.

One of South Windsor's big growers.

Impervite. (For water-proofing cement.)

Impervite is a water-proofing material, which when mixed with ordinary Cement makes absolutely water tight walls and flooring.

Splendid thing for cellar walls or wherever it is desired to have absolutely dry surfaces.

In 25 lb. package 15 cents per lb. "100 " "13 " "

Plastic Roofing.

(For Sheds, Barns and other buildings.)

This material comes in 300 lb. barrels all ready to apply. It is laid on with a trowel and can be applied over any old roof or surface of any kind.

The roof is therefore of one piece, without joints.

Makes the ideal roof.

See us about it.

Price, 10c per 1b.

OUR

O. & W. Asphalt Fibre Roofing

A Ready-to-lay roofing for Tobacco Sheds, Barns and all Similar Buildings.

Not the ordinary kind made of paper and tar, but a roofing of long felt wool fibre saturated with pure Asphalt, Fire resisting. Water proof. Comes in rolls of 100 sq. ft. and each roll contains nails and cement. Easy to lay. Cheaper than shingles.

These Oil Heaters do perfect baking and cooking. Fitted with oven, any kind of baking may be done. They are absolutely safe as the oil reservoir is outside the stove and the supply is conducted through pipes only as required.

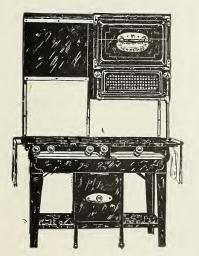

The
New
Richmond
Ranges

We have over twenty different patterns of the "Richmond". Beautiful in design and finish.

Every improvement found on these up-to-date ranges, features that are exclusive and found nowhere else.

THE RICHMOND RESERVOIR RANGE

For the country home where there is no available hot water supply. These tank ranges are ideal water heaters as well as good cookers.

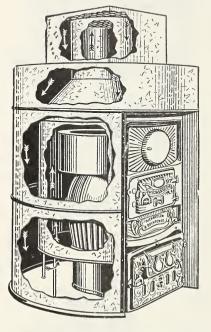

GAS RANGES

We have a beautiful line of gas ranges in many sizes and patterns.

These ranges are guaranteed to use little gas and do perfect work.

Circular and prices on request.

Make the Entire House Warm & Comfortable.

Think of every room in your home made warm as summer. No stoves to care for. No dust. No ashes.

Only one fire to tend to.

This is a highly satisfactory furnace that is easily installed, most scientifically made, that saves fuel while it furnishes wonderful heat. The Cellar is cold and all vegetables will keep readily.

This is our PIPELESS FURNACE. There are no pipes in cellar, just the heater with one large register directly over it.

Gives heat in every Room

Get our price and descriptive circular.

FOR TOBACCO SHEDS AND WAREHOUSES

In connection with our other business we have a large sheet-metal department wherein we make all kinds of tin and sheet iron work and also do tin-roofing, gutter and conductor work, etc. We call the attention of tobacco growers to the following specialties which we make for sheds and warehouses.

STOVES FOR CURING

We make to order small sheet-iron stoves with deflector tops for drying out tobacco, also plain galvanized iron deflectors to place over fires on

the ground to throw out heat over a wide area. These are inexpensive and yet very practical. ASK US ABOUT THE PRICE.

VENTILATORS

We make ventilators of galvanized iron for roofs of tobacco sheds in any size required. Strong and well made.

STERILIZING PANS FOR SEED BEDS

We make these pans of extra heavy galvanized iron, reinforced with angle iron on sides and top, in any size, and fitted with pipe connections to connect to boiler. These pans are placed

over seed beds and live steam turned into them which will destroy all germ life. Have proven very beneficial and insure growth of good sturdy plants. PRICE ON APPLICATION.

PIPE FOR SHEDS

It has been found that where sufficient heat is applied to sheds all danger of sweat tobacco is removed. Many growers have adopted the

method (with good success) of running galvanized iron pipes from cement stoves set in floor around the base of shed. We make up the pipe in any size to suit. Will be glad to furnish estimates and give information about it.

VAPOR PANS FOR WAREHOUSES

Galvanized iron vaporizing pans in any size made to order. We have a special iron that will not rust, costing but little more than regular iron, which makes a very desirable pan.

Farmer's Caldron Furnace

A necessity on every farm, for heating water and cooking stock feed.

THESE Furnaces may be had fitted to burn either Coal or Wood.

The Kettle may be bought separately and set in brick work if desired.

Inoculate Your Alfalfa, Clovers, Cow Peas, Soy Beans Vetches and all other legume crops with

Mulford Cultures

Small Cost Large Returns

Easy to Use No Labor Expense

Mulford Cultures contain pure, tested strains of active, vigorous nitrogen-fixing bacteria, for inoculating seeds of legumes or soil. Enormous numbers of these very valuable and desirable bacteria are thus available to you in every package of Mulford Culture and may readily be applied to your seed. The sealed bottle insures purity.

Increase Your Crops Improve Your Soil

Legumes offer the best-known means of maintaining soil fertility and rejuvenating over-cropped and worn-out fields. They add both humus and nitrogen to your soil and thus increase your yield of wheat, cotton, corn and other non-legume crops.

other conditionsidentical.

This contrast speaks for itself.

The U. S. Department of Agriculture and many State Agricultural Experiment Stations recommend inoculation of legumes with nitrogen-fixing bacteria to induce a prompt

"catch" and increase your yield.

Mulford Cultures are scientifically prepared and tested by experts, in the biological laboratories of H. K. Mulford Co., Philadelphia, U. S. A., with the same degree of care as Mulford Antitoxins, Serums, Vaccines, etc., which are standard all over the world.

Always specify on your order what crop you want to inoculate, as there is a different strain of bacteria for each legume.

USEFUL CHEMICAL MEMORANDA

(Partly from the first annual report of the Connecticut Agricultural Experiment Station, 1876)

Animal and vegetable substances, such as flesh, bone, wood, grain, manure, and the like, contain three classes of materials: Water, Organic Matters and Mineral Matter or Ash. If we heat a piece of wood, a whisp of hay, a bone, or a portion of manure or soil, in an oven, the water will be dried out. If we put the dried material in the fire, the Organic Matter, which consists mostly of the chemical elements, carbon, oxygen, hydrogen, and nitrogen will be burned away, and there will remain the Mineral Matter or Ash. The ash of these different materials generally contains more or less potash, soda, lime, magnesia, iron, alumina, silica, phosphoric acid. sulphuric acid, chlorine, or other ingredients. The proportions of these vary widely in different substances, from the large quantities to the merest traces.

Moisture.—All fertilizers contain more or less water, which, of course has no commercial value, and serves to make them heavier and relatively poorer in valuable ingredients. In the analysis that which is removed by heating to 212° Fahrenheit (or in some cases to a somewhat higher temperature), is designated as moisture By subjecting the dried material to a higher temperature, the organic and volatile matters are driven off, and the ash remains. By treating this ash with strong acids, all that is of any value is dissolved.

Sand and Insoluble Matters.—The residue, which resists the action of both fire and strong acids, consists of silica and other mineral matters. These possess no fertilizing value, and are classified as sand, etc.

Nitrogen, Ammonia.—In our ordinary fertilizers, much or all of the nitrogen exists in unavailable forms. By more or less rapid alterations, by decay or otherwise which take place in the soil, these are changed to other compounds, which the plant can readily use as food. Of these latter nitric acid, which contains nitrogen combined with oxygen, is one; ammonia which consists of nitrogen and hydrogen and is represented by the chemical formula N. H. is another. 14 parts by weight of nitrogen unite with 3 parts of hydrogen to form 17 parts of ammonia. Accordingly 14 parts of nitrogen are said to be equivalent to 17 of ammonia, or what is the same thing 100 parts of introgen are reckoned as equivalent to 121 parts of ammonia. In pure sulphate of ammonia, all the nitrogen is in the form of ammonia. In Peruvian guano, some of the nitrogen exists as ammonia also. In our ordinary fertilizers there is little or no ammonia. The very common practice of reckoning nitrogen as ammonia in fertilizers which do not contain it in this form is incorrect, misleading and therefore wrong, and ought to be abolished. Ammonia combined with sulphuric acid, forms sulphate of ammonia; nitric acid combined with soda, forms nitrate of soda.

Phosphoric Acid: Soluble, Reverted and Insoluble.—By phosphoric acid is understood the compound of phosphorous and oxygen, which is represented by the chemical formula, P₂O₅. This combined with lime, forms phosphate of lime. The phosphate of lime which occurs in bone, and in South Carolina and other fossil and mineral phosphates, contains three parts of lime to one of phosphoric acid. This is often called bone phosphate, and is insoluble in water. When the bone phosphate is treated with sulphuric acid, the latter takes part of the lime to itself, forming sulphate of lime, and leaves the phosphoric acid in the form of a Superphosphate. This last is soluble in water, and when used as a fertilizer can be taken up by the plant at once, while the bone phosphate is slowly available as plant food. Phosphoric acid which has been rendered soluble, often enters into other forms of combination with lime, alumina, etc., which, though insoluble in water, are soluble in citrate of ammonia. The terms, reverted, reduced and precipitated, are applied to it when in this form.

The reverted phosphoric acid ranks in solubility, and consequently in value, between the soluble and insoluble. The soluble and reverted are sometimes

classed together as Available phosphoric acid.

In some analyses the percentage of phosphoric acid is not stated separately, that of "bone phosphate of lime" being given in its stead. Sometimes the expression "soluble bone phosphate of lime" is met with, which is certainly a misnomer. 142 parts by weight of phosphoric acid P₂ O₅ unite with about 168 parts of lime C A O to form 310 parts of bone phosphate CA₅ (PO₄)₂; 100 parts of pounds of phosphoric acid are said, therefore, to be equivalent to 218 parts of bone phosphate. Special stress is laid on this point, because those not familiar with chemistry are apt to be deceived in comparing analyses, in some of which the term phosphoric acid, and in others the term bone phosphate, is used. It would be more accurate and clear, and in every way better to discard the term bone phosphate of lime in analyses of fertilizers, and speak only of phosphoric acid.

Potash, or potassa, is the compound of the metal potassium with oxygen, which is represented by the chemical formula K₂O or KO. This combined with sulphuric acid forms sulphate of potash. Potassium and chlorine together form

chloride of potassium, or "muriate of potash," as it is called by dealers.

100 pounds of pure sulphate of potash contains about 54 pounds of "actual potash." 100 pounds of sulphate of potash are therefore said to be equivalent to 54 pounds of actual potash, and vice versa, 54 pounds of potash, in the sulphates are reckoned as equivalent to 100 pounds of sulphate of potash. In the "muriates" 100 pounds of chloride of potassium are reckoned equivalent to about 63 pounds of potash, and vice versa.

Carbonate of Potash, K2CO3 - This fertilizer chemical is the ingredient which gives to wood ashes and cotton hull ashes their value as tobacco fertilizers, and it is practically free from magnesia. It was formerly prepared by extraction from wood ashes, and formed the "pearlash" of commerce. It has been used

with good effect as a tobacco fertilizer in the Poquonock experiments.

The following figures will be found useful in calculations of the composition of fertilizers.

HARTFORD

Seed Department

CONN.

About Seed Potatoes.

WE bring down from Northern Maine each year only a limited number of certain varieties, particularly of the earlier kinds. Of course, of the Green Mountain, and other later stocks, we have large supplies.

THE ONLY WAY, therefore to be sure to get the special variety you want is to order NOW.

Stock is due to arrive here about April 5th to 10th. If you will let us have your order now, on this form (checking the number wanted against the name of the variety) we shall hold them for you, or, ship as desired.

PRICE is \$7.50 per bbl. sack, for all varieties. F. O. B. Hartford.

Olds & Whipple you may have my order for the following:—

Early Harvest	The Delaware
Spaulding Rose	Carman 3
Irish Cobbler	Green Mountain
Bovee	Golden Prolific
Early Rose	Ex. Early White Pearl
Beauty of Hebron	Gold Coin
New Queen	Norcross
